RBC One UX/UI Catalog Typography

Collapse All

Primary Font

Fira Sans

A primary typeface that aligns with brand and is used for larger headings that draw readers into the design.

Secondary Font

Google Roboto is a typeface accepted as part of RBC branding. It is a modern font that is designed to offer great

Roboto

readability and maintain optimal legibility across different screen sizes and pixel densities. It is greatly optimised for both desktop and mobile use, especially in such critical areas of RBC One applications as rendering digits and special symbols. It offers a light and clean aesthetic that contributes greatly to usability of RBC One applications For an elegant and fresh digital experience across different platforms, we recommend using lighter weights over heavier

ones. Though in some cases a harmonious combination of varying font sizes and weights creates a more interesting and

spacing may improve legibility and readability for smaller font sizes as well as text on the buttons and numbers in the lists and tables. The negative tracking values though maybe used to allow more information fit into a smaller area without losing

Letter Spacing

Type settings

much clarity. Refer to CSS specifications for exact setting for each case.

Primary Button

{ letter-spacing: -0.2px } Heading 1, Heading 2

critically important in RBC One suite do not exceed these values unless used for bigger bodies of text where settings should

In heading or when using fonts above 24px, a line height around 1.2 - 1.3 of font size is suggested. To calculate line height,

multiply the font size by 1.3 and round to the nearest whole number. Refer to CSS specifications for exact setting for each

{ letter-spacing: 0.2px, text-transform: uppercase }

The default tracking of Roboto is perfect for most situations and should be used by default. In some cases, adjusting letter-

Line height Generally, when using font size of 24px and below, a line height is set to 1.3 - 1.4 size of the font size. Since vertical space is

be 1.4 – 1.5 size. Refer to CSS specifications for exact setting for each case.

Word spacing Word spacing is always set to 100% by default for all elements.

Substitution System Fonts Since Roboto in some cases may be unavailable to the system a system substitution font to be used is - "Arial, Helvetica,

Sans-Serif". These system fonts offer similar readability and legibility as Roboto, as well as similar letter size and geometry.

Generally, we recommend that visual elements and columns of type be left-aligned. In most instances, this flush-left and

ragged-right approach provides consistent anchoring of the content and a uniform layout. In many cases the alignment is

dictated by the actual use of the information especially when it comes to financial data, long numbers, data visualization

media, and other standards that users are accustomed to. Refer to CSS specifications for exact setting for each case.

The space between two paragraphs should be 1.5x the font size (150% / 1.5rem). Use a margin-bottom of 1.5rem to

Alignment

Paragraph & Body Settings

Paragraph spacing

Character count Roboto provides a wide range of characters and is designed to maintain optimal legibility in both small and large sizes as well as low and high pixel densities. Using the optimal number of letters in a text column line ensures good legibility in an

application. If possible, 50-60 letters per line is best for ease of reading. If a line is too short, the eye will have to travel

Line endings

left and right too often, breaking the reader's rhythm.

achieve optimal paragraph spacing.

Ideally 'orphaned' single short words appearing on a new line before full stop or line-break should be avoided. Best Practises

When typography is not positioned as flush left and ragged right, try to ensure even line endings and avoid hyphenation.

Accessibility

Do's and Don'ts

- Use base font settings for most situations

- Use base font settings for most situations - Incorporate thicker font weights only to create contrast and hierarchy by emphasizing top level content - Don't use Header or Subheader if the line is too long and text needs to wrap

**CSS Specifications** 

Bold

700

- Incorporate thicker font weights only to create contrast and hierarchy by emphasizing top level content

Base CSS Values Base font (default) - Roboto 14px, line-height 18px. Line height and letter spacing is variable and depends on font weight, size and use, as well as accessibility requirements. Font weights are expressed in CSS through numerical values

line-height: 36px

letter-spacing: 0
